

◀ chilled, filtered, boiling

The latest modular underbench on-tap series launched by Rheem Australia integrates boiling, chilled, and filtered water into one stylish water dispenser.

Product Manager Peter Faase says: 'The advantages of having only one water dispenser are clear cut in terms of aesthetics, useability, performance efficiency and installation. All your water needs are available at the touch of a button, and the discreet underbench design ensures maximum use of empty cupboard space.'

The on-tap series comes in a three- and five-litre model. It has a seven-day programmable timer and a filter that removes chlorine, fine dirt and sediment particles, and reduces costly lime scale build-up. The under-counter cabinet is compact, requires only a cold water connection and a standard power point.

keep connected ▶

Cadbuild's recently released architectural design software program, SoftPlan Version 14, includes a reView 3-D module which allows SoftPlan users to send floor plans and 3-D images to non-SoftPlan users. This means your clients will be able to thoroughly inspect every aspect of their new construction work inside and out.

reView gives instant access to SoftPlan drawings through email or a pocket PC, and allows all those involved in a building project – from the designer, builder, trade contractor, and the client – to view, comment, and mark-up the drawings.

SoftPlan's 3-D capabilities now include artistic rendering modes, Sketched and Illustrated, and textured, real-time renderings. Additionally, the estimating module includes a visual estimating tool to quickly and visually connect items on the materials list to their corresponding item on the drawing.

◀ raising the level

Pasco Construction Solutions has introduced a new product for the design and construction of raised floors.

The award-winning Buzon Pedestal can be used with pavers, timber decking and steel grating to create raised floors on balconies, terraces, green roofs and temporary floors. Capable of accommodating heights from 17mm to 620mm, it can conceal services and offer easy access for maintenance of waterproof membranes.

The Buzon Pedestal, capable of supporting 1000kg, incorporates a patented slope-correcting device which compensates for a substrate fall of 0–5 per cent, to provide a perfectly level floor finish. The interchangeable spacer tabs allow for gaps of 2mm to 10mm between pavers, to provide positive drainage and ensure paving lines are even.
